# The CRRT Nursing Quality Council

Susonna Guimond, RN, MSN<sup>1</sup>; Kathrine Winnie, RN, DNP<sup>1</sup>

Keck Medical Center of USC

## **Background**

- Nursing engagement improves outcomes.
- Nurses developed a CRRT shared governance council to make nursing decisions related to CRRT, clarify practices, and share information.
- Since council formation, membership had declined.

#### **Purpose**

To increase council participation, revitalize meeting structure, and improve CRRT outcomes.

### **Methods**

Strategies to increase staff nurse membership

- Verbal invitations to join the council
- Early evening meetings
- Text message meeting reminders
- Relevant agenda items to address current issues

#### Topics addressed

- Opportunities to improve CRRT documentation
- Supply issues
- Learning needs
- Interprofessional communication
- Action plans for projects

#### Evaluation

The CRRT Quality Council was able to increase meeting attendance, complete improvement projects, provide education, share information, and make nursing policy and practice decisions.

Future goals include measuring and improving CRRT-specific quality metrics, increasing partnerships with interprofessional stakeholders, and exchanging knowledge and best practices with other programs.

## **Implications**

Shared governance councils may be utilized to ensure nurse engagement in CRRT nursing decisions and practice. RNs serving on the council will have experiential knowledge regarding nurse education needs, patient experience, and practice opportunities. Further evaluation of outcomes is necessary to demonstrate the full benefits of CRRT Quality Councils.
